Creating Google API Key

The Google Places API Web Service uses an API key to identify your application. You'll need your own **server key** before you can begin using the API. Follow these steps to create or modify a project for your app in the Google Developers Console and enable the Google Places API Web Service.

1. Go to the [Google Developers Console](https://console.developers.google.com/). (<https://console.developers.google.com/>)
2. Select a project, or create a new one.
3. In the sidebar on the left, expand **APIs & auth**. Next, click **APIs**. Select the **Enabled APIs** link in the API section to see a list of all your enabled APIs. Make sure that the Google Places API is on the list of enabled APIs. If you have not enabled it, select the API from the list of APIs, then select the **Enable API** button for the API.
4. In the sidebar on the left, select **Credentials**.
5. If your project doesn't already have a **key for server applications**, create an API key by selecting **Create New Key**(under "Public API access") and then selecting **Server key**.
6. Click Create

Do not use this key outside of your server code. For example, do not embed it in a web page or in a mobile application.

7. Send this API key to pmonline@amadeus.com

With this key you will be able to search hotels within e-Power using an address, city or landmark.
Note: GDS Hotels can only work in the geocoded countries.

8.

9.

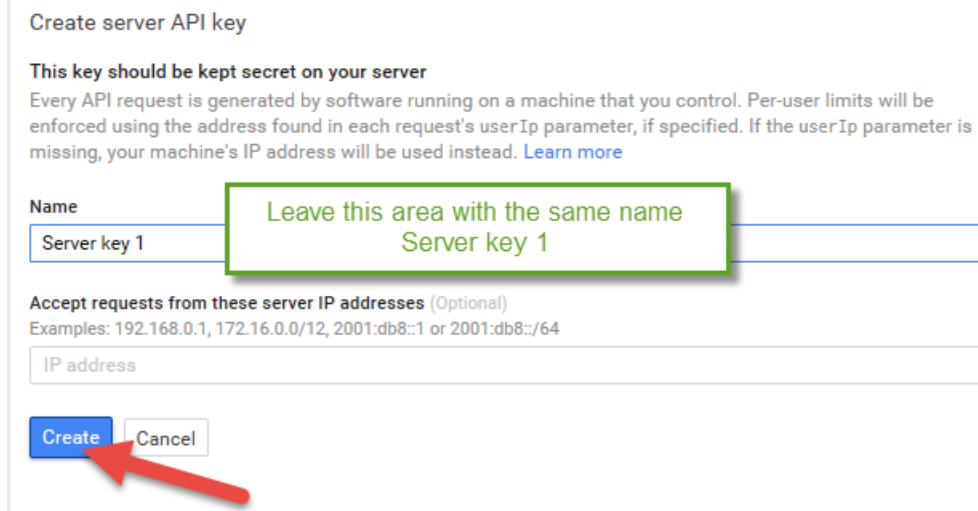

Create a new key

You need an API key to call certain Google APIs. The API key identifies your project. Also, it is used to enforce quotas and handle billing, so keep it safe.

Server key Browser key Android key iOS key

10.

Create server API key

This key should be kept secret on your server

Every API request is generated by software running on a machine that you control. Per-user limits will be enforced using the address found in each request's userIp parameter, if specified. If the userIp parameter is missing, your machine's IP address will be used instead. [Learn more](#)

Name

Server key 1

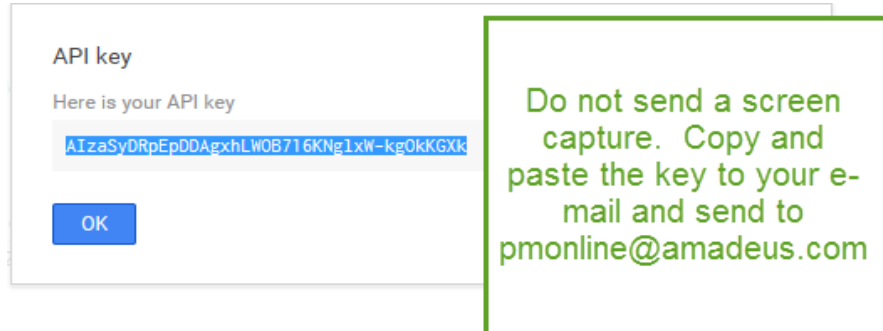

Accept requests from these server IP addresses (Optional)

Examples: 192.168.0.1, 172.16.0.0/12, 2001:db8::1 or 2001:db8::/64

IP address

Create Cancel

11.

API key

Here is your API key

AIzaSyDRpEpDDAgxhLW0B716KNg1xW-kGOkKGXk

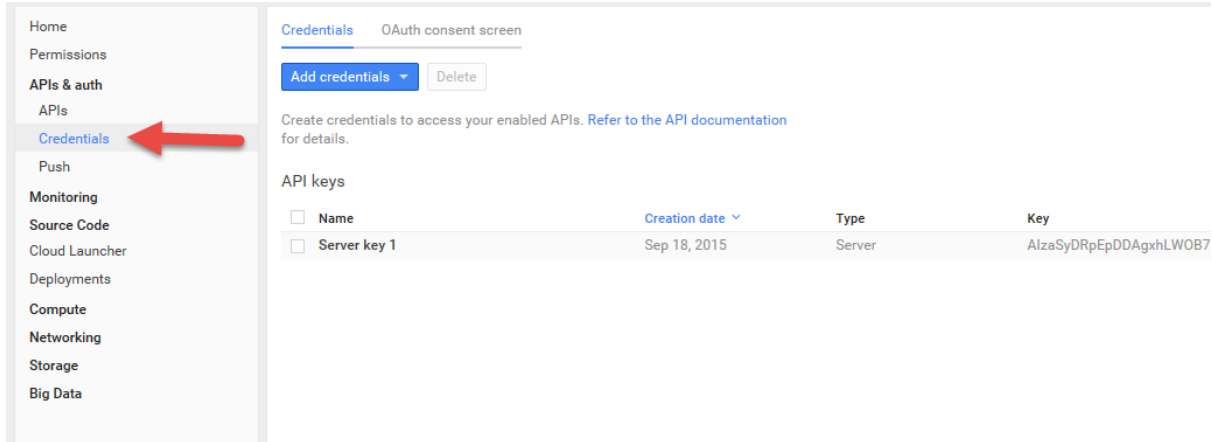

OK

Do not send a screen capture. Copy and paste the key to your e-mail and send to pmonline@amadeus.com

How to regenerate the API key

*Note should only be used if the PMOnline team request a new key.

1. Click Credentials

Home
Permissions
APIs & auth
APIs
Credentials
Push
Monitoring
Source Code
Cloud Launcher
Deployments
Compute
Networking
Storage
Big Data

Credentials OAuth consent screen

[Add credentials](#) [Delete](#)

Create credentials to access your enabled APIs. [Refer to the API documentation](#) for details.
