How To Create Splash Screens

Creating Splashscreens

Splashscreens can be used:

- Either as waiting screens displayed on top of certain pages (e.g. A waiting screen displayed on top of the flight results page after a flight search whilst waiting for the results)

- Or as temporary animations, images, text, etc. directly inside certain elements of a page (e.g. a loading gif and customized text displayed inside the Dynamic Cross-Sell Teaser in the shopping basket page whilst waiting for the results).

The second case is easy to define thanks to the Host Admin's Edit Mode. The first case is very simple as well. You just need to upload splash screens HTML pages in this folder with a file name that corresponds exactly to the page where you want to show the waiting screen. To effectively use Splash Screens there are some simple rules that we have to know.

Splash Screen Usage Order
Amadeus e-Power check files by order to bind a splash screen to page for different conditions after user click event or while a page is requested.

Please find below the corresponding names:

1. **Hotel_HotelSearch.htm** → {Page}_{ButtonName}.htm This waiting screen will be shown every time a "Hotel Search" button is clicked when user is in Home Page

2. **SearchTimeTable.htm** → {Method}.htm This waiting screen will be shown when e-Power find such method in URL, except when other more specific splash screens are available
   Example: https://staging.epower.amadeus.com/**YOURPORTAL**/#CheckIn-Date=22/10/2014&CheckOutDate=23/10/2014&CityCode=PAR;C&Culture=en-US&Method=SearchTimeTable&Page=Hotel

3. **Search Methods:** Search, SearchSchedule, SearchTimeTable, HotelSearch, CarSearch, PackageSearch
   Book Methods: CompleteBooking, ContinueCompleteBooking
   a. Flightschedule.htm
   b. Hotelsearch.htm
   c. Carsearch.htm
   d. Packagesearch.htm
   e. Basket.htm
   f. Passenger.htm

4. **Flightfaresearch.htm** → {ButtonName}.htm This waiting screen will be shown every time "Flight Fare Search" page is requested. Here is a list of examples of other specific splash screens that can be used
   a. BookBasket
   b. MyTripSearch

5. **Search.htm** → {Page}.htm This waiting screen will be shown every time a "Search" button is clicked, except when other more specific splash screens are available

6. **Default.htm** → This waiting screen will be shown everywhere, except when other specific splash screens are available

FirstLoad.htm → This waiting screen will be shown when portal is first loading

If none of these files are found in Splash Screen folder, "#loaderModal" div of site shell file will be shown. If you don't want to show splash screen in a specific condition simply delete all of its content but keep the file in SplashScreen folder.

Module Based Setup

There is another possibility to use Splash Screens which is to set a Splash Screen template to a module. Hostadmin's can access to this function via Edit view of page.

Splash Screen Code Example:

```
<img src="Images/loader33.gif" />
{{if Parameters}}
   <br><br><br>
  <div style="width:100%;text-align:center;">
  {{each(i,v) Parameters}}
      <br>
       ${Location1}{{if Location2}} > ${Location2}{{/if}}
      <br> ${Date1}{{if Date2}} - ${Date2}{{/if}}
      <br><br>
  {{/each}}
  {{if Parameters[0].Passengers}}
   {{each(j,k) Parameters[0].Passengers}}{{if j>0}}, {{/if}}${Count}
${Type}{{/each}}
   {{/if}}
  </div>
{{/if}}
```

Available Parameters For Search Methods

Location1:
> Flight : Departure location
> Hotel : City
> Car : Pick up location
> Train : Departure location

Location2:
> Flight : Arrival location

Car : Drop off location
Train : Arrival location

Date1:

Flight : Departure date
Hotel : Check in date
Car : Pick up date
Train : Departure date

Date2:

Hotel : Check out date
Car : Drop off date
